ACADEMIC PROJECT:

➤ **Solar Powered Efficient Mini Inverter:**

Role: Team Leader

The aim of this project is to use solar energy for domestic purpose using an inverter. Solar panel work by absorbing sunlight with the photovoltaic cell. Photovoltaic cells absorb the Sun's energy and converts it into DC energy. Generated DC energy converted into AC energy with the help of Inverter. Inverter circuit is given to the step-up transformer where the transformer works on principles of electromagnetic induction and mutual induction. The transformer step up the voltage of 12V AC to 220 AC. As whole world is facing a problem of global warming and energy crisis, this project help to reduce these problems by using renewable energy source to generate electricity.
